for messaging and collaboration

## SYSTEM REQUIREMENTS

### Windows

Pentium 500 MHz  
256 MB RAM  
Windows 2000 (SP 4)  
Windows XP  
Windows 2003

### Red Hat Linux

Pentium 500 MHz  
256 MB RAM  
Red Hat Enterprise Linux

### SUSE Linux

Pentium 500 MHz  
256 MB RAM  
SUSE Linux 9

### Mac OS X

G4 or G5  
256 MB RAM  
Mac OS X 10.3 Panther  
Mac OS X 10.4 Tiger

### Windows

### Red Hat Linux

### SUSE Linux

### Mac OS X

## KERIO MAILSERVER

### For messaging and collaboration

Kerio MailServer helps organizations to easily manage email, protect against viruses and spam, and introduce collaboration to their users.

### About Kerio

Innovating in Internet security since 1997, Kerio Technologies Inc. provides Internet messaging and firewall software solutions for small to medium sized networks across the globe. Kerio's corporate headquarters are located in Santa Clara, California.

## SECURITY FIRST

### Secure architecture

Kerio MailServer builds upon an all-round security approach, integrating SSL for all email protocols, antivirus, anti-spam, secure backup and administration.

### Anti-virus protection

Since most viruses and worms spread primarily through email, Kerio MailServer scans each message across all delivery protocols, making sure that users can neither receive nor send any infected email.

### Integrated McAfee Anti-Virus

Kerio MailServer with integrated McAfee Anti-Virus is available for Windows, Linux and Mac OS X platforms, and further simplifies management with its automated virus database update and no-nonsense configuration.

### Supported third-party anti-viruses

Administrators can choose from a number of third party anti-virus products offered by such leading vendors as Alwil, Computer Associates, Eset, Grisoft, Sophos and Symantec.

### Dual engine anti-virus

Kerio MailServer can scan simultaneously with the integrated McAfee Anti-Virus and one additional third party engine, effectively doubling the chances of catching new viruses at first outbreak.

### Anti-spam protection

Kerio MailServer offers a variety of weapons in the war on spam. The fight is waged at two fronts: preventing Kerio MailServer users from receiving spam, and preventing the server itself from being exploited by spammers.

### Bayesian spam filter

SpamEliminator, powered by a Bayesian spam filter, analyzes the content of all received messages and weeds out spam. Users can train the SpamEliminator using Junk mail buttons in Outlook, WebMail or simply by moving spam messages to Junk email folder in any other client.

### Spam Repellent

Spam Repellent helps fight off spam zombies by delaying the SMTP handshake, effectively cutting off impatient spam robots.

### Advanced anti-spam tools

Kerio MailServer defends against Directory Harvest Attacks and blocks blacklisted spammer IP addresses as well as spam bombing attacks.

### Address Book whitelisting

Messages from known senders recorded in the Address book are automatically whitelisted, minimizing false positives and contributing to a better user experience.

## CAREFREE COLLABORATION

### Collaborative messaging

Kerio MailServer helps teams to become more efficient using email as their primary collaboration tool. Kerio MailServer integrates with Microsoft Outlook, Microsoft Entourage and Kerio WebMail to provide user access to email, calendars and contacts.

### Kerio WebMail

For business travelers and mobile users, Kerio MailServer offers a full-featured WebMail client with a rich text editor as powerful as most software clients.

Users can send and receive messages, lookup contacts in multiple address books, schedule meetings, share calendars or even get notified of upcoming events.

The free/busy service keeps track of Contacts' availability for shared calendar events.

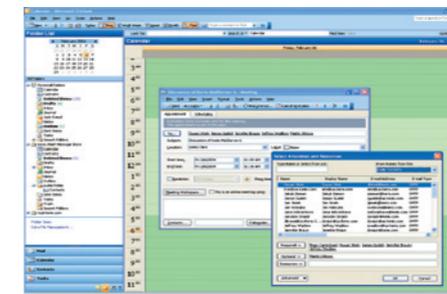

### Kerio WebMail Mini

Optimized for small-screen PDAs such as Palm Treo or Pocket PC, Kerio WebMail

Mini allows users to check their email while on the road.

### Microsoft Outlook integration

Kerio Outlook Connector links Microsoft Outlook to Kerio MailServer and allows users to access their shared calendars, contacts, tasks, and email.

### Microsoft Entourage integration

For Mac users, Microsoft Entourage 2004 seamlessly syncs up calendars and address book contacts with Kerio MailServer. Users can easily share their contact, calendar and email folders with each other.

### iCal and Address Book

Kerio MailServer allows Mac users to subscribe and publish calendars from iCal and synchronize their contacts using Address Book.

### Mailing lists

Discussion groups and mailing lists can be easily created with individual policies regarding subscription and message posting.

## ADVANCED ADMINISTRATION

### Directory services

In addition to using the internal user database, administrators can use Microsoft Active Directory or Apple Open Directory for user authentication and management.

### Scalability

Kerio MailServer can support anywhere from 20 users, in a small company, to hundreds of users in a larger corporate or institutional email environment.

### Web-based administration

Web-based administration allows specified users to create and delete accounts in their domain conveniently from a web browser.

### Mail backup

Kerio MailServer can schedule differential or complete backup of the message store. The backup file can be stored either locally or on another server.
